# MESSAGE FROM THE PRESIDENT

**Assalamualaikum and greetings to everyone.**

Welcome back to yet another exciting event; The 19th. MATCVS Annual Scientific Meeting. The meeting is jointly organised by University Malaya Medical Center and National Heart Institute. I am delighted to bring change in the way this year's meeting will be run. Changes and adaptability is the key to the survival and progress of the Malaysian Association for Thoracic & Cardiovascular Surgery.

This year, the organising committee has decided on and adopted the theme 'Multidisciplinary Team Approach To Better Patient Care'. The International fraternity has for quite awhile recognised, adopted and established guidelines for a Heart Team approach for patient care to ensure good outcome for patients. However, this approach of care, is slow to reach our shores and perpetuated the 'Little Napoleons' and 'Gate Keepers' culture here. This change is necessary, appropriate and timely for us, as our nation had recently decided on a drastic change in the way we do things for the country. We too need to find a better way we treat our patients.

Emphasis for this event will be to re-look at issues, current and advances in the management approaches, in the perspectives of our team partners; the cardiothoracic surgeons, anaesthesiologists, cardiologists, interventional radiologists and our paramedical staff. We hope that this meeting will create genuine awareness at the various hospitals and healthcare institutions and such a MDT style of management will eventually be a norm and even mandatory.

We have also added a full day of lecture series, symposiums and discussions for the benefit of our referral doctors ie. general practitioners and physicians. They can finally see the 'face' to their referral and can personally interact with the surgeons.

We will also invite young doctors and medial students to come and get exposed to the kind of work we do. I believe that by doing so, we create better awareness, understanding and hopefully interest in this field of surgery.

Prior to main event, we are proud to initiate the KL Review Course, which will be of tremendous value to cardiothoracic surgical trainees in the National CTS training Program and others sitting for the FRCS-CTh examinations. This course is an adoption with the support of the ever so popular Birmingham Review Course which has never been done outside the United Kingdom.

We have invited 6 internationally renowned surgeons from UK, Hong Kong, South Korea and Singapore, specializing in the various subspecialty fields for both Adult and Paediatric CTS and Vascular Surgery, to speak, run workshops and even perform surgeries in our hospitals.

All these activities will not be made possible without the support and help from our medical industry partners. I thank them for their unwavering support all these years. I would like to also thank the organizing committee for showing incredible dedication and professionalism. Finally, I would like to thank all the participants for attending the ASM, and making it a success.

Wassalam.

**Prof. Raja Amin bin Raja Mokhtar**

President

Malaysian Association for Thoracic and Cardiovascular Surgery

# MESSAGE FROM THE ORGANISING CHAIRMAN

**Warmest welcome to all who is attending the 19th Annual Scientific Meeting of the Malaysian Association of Thoracic and Cardiovascular Surgery ( MATCVS).**

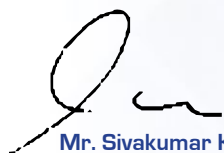

The meeting this year is a combined team effort between University Malaya Cardiothoracic Surgery Team and IJN Cardiothoracic Surgery Team. The theme for this year is 'MDT Approach To Better Patient Care'.

This theme has been chosen in view of the current practices worldwide where cardiothoracic diseases are getting more complex and no single individual can decide on the best management for the patient but a team approach is the best way forward. With that in mind the format for this year's meeting has incorporated the MDT panellist sessions where a few complex cases will be discussed live and decisions made together by the panellist based on current best evidence. This will be the first of its kind and we hope the participants can benefit from this live discussions which will be divided to Adult Cardiac Session, Thoracic Session, Paediatric Session and Aortic Session.

For the first time also in MATCVS Scientific Meeting, there will be a General Practitioner Session, where common cardiothoracic related issues will be presented to the General Practitioners . We hope to use this session as a platform to listen and to help the general practitioners in this region to refer the cases appropriately and in a timely fashion and also to encourage the general practitioners to embark into screening programmes for cardiac diseases and lung cancer.

We have also set up some exciting programmes prior to the main meeting. This includes the KL Review course, where the main faculty of the world renowned Birmingham Review Course will join our local faculties to run the first formal Cardiothoracic Surgery Review course in this region 2 days before the pre-congress. A historical moment for the UK and Malaysian team as the Birmingham Review course has never been done outside the UK. Our distinguished and world renowned speakers include Mr. Jorge Mascaro, Mr. Ehab Bishay, Mr. Tim Graham, Mr. Pala Rajesh and Professor Malcolm Underwood, who are the main key players in the Birmingham Review Course .

The pre congress session has been formatted to accommodate nurses, perfusionist and junior doctors. For the Junior doctors we have collaborated together with College of Surgeons Malaysia and Johnson and Johnson Malaysia to run the Science of Tissue Management [ SoTM ] course.

**Mr. Sivakumar Krishnasamy**  
Organising Chairman  
19<sup>th</sup> MATCVS Annual Scientific Meeting

A parallel programme has also been made for the perfusionist. The nursing session will be based on the PPUM CICU Hand book which is a joint effort by cardiothoracic CICU nurses and Consultant Cardiothoracic Surgeon of University Malaya Medical Centre. The book will be launched in this session.

We are honoured to welcome Mr. Pala Rajesh from UK, a renowned and very experienced Thoracic Surgeon and a Council member of the Royal College of Surgeons Edinburgh and European Board of Cardiothoracic Surgery to deliver the Razali Hashim Memorial Lecture. He is going to share his experience on how he has been involved in developing the cardiothoracic training programme for Malaysia.

It is the hope of the Organising Committee that the participants of the 19th MATCVS Annual Scientific Meeting will find the meeting to be educational, enjoyable and memorable. I would like to also take this opportunity to thank the organizing committee, from PPUM and IJN, the esteemed sponsors, as well as various parties who helped out organizing and conducting this event to a success.

Wishing you to have a good stay in Petaling Jaya.

## NOTES

[illegible]

## NOTES

This image shows a blank sheet of white paper with horizontal ruling lines. A faint, decorative background pattern is visible, consisting of overlapping squares and diamonds in various shades of light blue and lavender. Some of these shapes contain a fine grid of small dots. The overall aesthetic is clean and modern, typical of contemporary stationery or notebook designs.

# BioCer

HaemoCer™ PLUS

HaemoCer™ PLUS Absorbable Polysaccharide Haemostat (APH) is a proprietary patent pending technology created via BioCers *Polysaccharide Ultra-hydrophilic Resorbable Engineering (PURE)* process.

HaemoCer™ PLUS APH incorporates a sophisticated, plant-based polymer crosslinking that creates ultra-hydrophilic, biocompatible particles.

Upon contact with blood, HaemoCer™ PLUS enhances the natural clotting cascade by rapidly dehydrating the blood and accelerating the concentration of platelets, red blood cells and coagulation proteins at the bleeding site.

The second mode of action of HaemoCer™ PLUS is the formation of a robust gelled matrix that adheres to and forms a mechanical barrier to further bleeding.

# NON NARCOTIC PAIN MANAGEMENT TREATMENT IS IN OUR DNA

ON-Q\* is a postoperative, non narcotic pain relief system designed to deliver **local anaesthetic** to the surgical site through specially designed catheters-providing patients with **2 to 5 days of targeted pain relief**.

## EXTRAPLEURAL CATHETER PLACEMENT

The ON-Q Tunneler and T-Peel introducer is placed below the pleura on the paravertebral space resulting in a multi-level intercostal nerve block.

FRANK DETTERBECK, M.D.

## WITH THE ON-Q\* PAIN RELIEF SYSTEM, PATIENTS:

- Went home an average of 1.1 days sooner<sup>1-4</sup>
- Reported up to 69% lower pain scores<sup>5-6</sup>
- Were up to 3x as likely to report high satisfaction scores<sup>5,7,8</sup>
- Are more likely to experience better pain management with fewer side effects<sup>1,7,9</sup>
